

REDWOOD STACKS • FREE RESOURCE

Does it have a right answer?

The one test that predicts which tasks AI takes over first, and which ones stay with people.

GUIDE • 6 PAGES

REDWOOD STACKS

redwoodstacks.ai

WHY IT MATTERS

A task with a right answer can grade its own work.

Run the task

Check the result

Next run is better

Every run gets checked. Every check improves the next run. That is why these tasks improve fastest, and why they are the ones being handed to AI first.

SORT YOUR TASK LIST

Two kinds of work.

HAS A RIGHT ANSWER

- Reconciling a statement
- Matching an invoice to a PO
- Checking a schedule for conflicts
- Pulling fields out of a form

NO SINGLE RIGHT ANSWER

- The note to an upset customer
- Pricing a deal
- Choosing between two good hires
- Deciding what to build next

Hand the left column off first. The right column stays with people longer.

THE TEST

One question sorts the whole list.

“Could this be checked without me?”

Yes

Hand it off first. Expect the tools to keep getting better at it.

No

Keep a person on it. Use AI as a second opinion at most.

THE TAKEAWAY

Which of your tasks has a right answer?

Write the two lists. The first one is your automation backlog, in order.

Want help sorting your own list?

The AI Discovery Session is a free 30-minute triage call. You say what the business does and where it is stuck, and you leave with an honest read on where AI can realistically help and where it cannot.
